### 技术规格

<b>Background:</b>	This gene encodes a member of the sodium/calcium exchanger integral membrane protein family. Three mammalian isoforms in family 8 have been identified. Na <sup>+</sup> /Ca <sup>2+</sup> exchange proteins are involved in maintaining Ca <sup>2+</sup> homeostasis in a wide variety of cell types. The protein is regulated by intracellular calcium ions and is found in both the plasma membrane and intracellular organellar membranes, where exchange of Na <sup>+</sup> for Ca <sup>2+</sup> occurs in an electrogenic manner. Alternative splicing has been observed for this gene and multiple variants have been described.
